

Chapter 13

Frame.io and Dropbox Replay Integration

DaVinci Resolve has sophisticated integrations with Frame.io, and Dropbox Replay video review and collaboration services designed specifically for the postproduction industry.

Enabling Frame.io Integration in Preferences

An Internet Accounts panel in the System tab of the DaVinci Resolve Preferences lets you sign into your Frame.io account and specify a local cache location for media being synced with Frame.io. You'll need to enter your login name and password to enable Frame.io integration, but once entered, DaVinci Resolve will sign in automatically when DaVinci Resolve opens.

The Internet Accounts panel of the System tab of the DaVinci Resolve Preferences window (login deliberately obscured)

The local cache location is used to store clips you import into a DaVinci Resolve project from the Frame.io volume in the Media Storage panel of the Media page.

Deliver and Upload to Frame.io

A Frame.io preset at the top of the Deliver page's Render Settings panel lets you render and upload a program for review. All options in the Render Settings panel update to present suitable controls for this process.

When you choose the Frame.io preset, the Location field turns into an Upload To field, and the Browse button lets you choose a project and folder path to which to upload the exported result.

Choosing the Frame.io preset

Choosing a Frame.io account to deliver a program to

When you export to Frame.io, the available choices in the Resolution, Format, Video Codec, and Type pop-up menus are limited to those that are most suitable for Frame.io file sharing. Choose the desired export options, then click the Add to Render Queue button to add this job to the Render Queue as you would with any other export. When that job is rendered, it automatically proceeds to upload to Frame.io, and an upload percentage indicator appears in the job listing to show how far along this upload is. When it's finished, the job displays the text "Upload completed."

The job in the Render Queue shows you the percentage the file has uploaded so far

This upload is done in the background, so you can continue working on other things in DaVinci Resolve while the file uploads. If you want to see how long the upload will take on any other page, you can choose Workspace > Background Activity to see the Background Activity window.

Frame.io Comments Sync with Timeline Markers

When you render a timeline directly to Frame.io, that timeline is automatically linked to the movie that's been uploaded to Frame.io, and all comments, "Likes," and graphical annotations (drawings and arrows) from reviewers that are added online via the Frame.io interface are automatically synced to Frame.io markers on your timeline (so long as your computer has an active internet connection). Frame.io markers are distinct from all other markers and can be independently shown and hidden, or deleted. Drawings and arrows from Frame.io are converted into their equivalent DaVinci Resolve annotation graphics for visibility in DaVinci Resolve.

Comments and graphical annotations from Frame.io appear as markers with their corresponding overlays in your DaVinci Resolve Timeline

Working With Frame.io Markers

Double-clicking any Frame.io marker in the Timeline opens a dialog that lets you send replies to comments that appear on Frame.io, enabling editors to respond directly to commenters.

You can also place Frame.io markers on the Timeline to have them automatically sync back to Frame.io, giving you the ability to send your own comments back to commenters (be kind).

If you delete one or more Frame.io markers on the DaVinci Resolve timeline, those markers will also be deleted in Frame.io. This includes the **Mark > Delete All Markers > Frame.io** command. This is not undoable.

The editor talking to himself using the Frame.io comment dialog that appears when you open a Frame.io marker

Frame.io Marker Navigation

You can specifically navigate only the markers created in Frame.io while in the comment dialog of a Frame.io marker, using the Previous Marker (Shift-UpArrow) and Next Marker (Shift-DownArrow) commands. This allows you to skip directly from comment to comment in Frame.io without having to either navigate all markers in-between, or double-click each Frame.io marker individually to respond. Frame.io interoperability is a Studio Only feature.

Importing Media from Frame.io

A Frame.io volume appears in the Media Storage panel of the Media page that lets you access the media available from your Frame.io account. Within this Frame.io volume, a top-level directory represents your account directory, and within that each project you've created in Frame.io appears as a sub-directory.

Accessing the directories of a Frame.io account from the Media Storage browser

Any media files that can be accessed in Media Storage can be imported into the Media Pool via the usual methods. Once added to the Media Pool, that media file downloads in the background to the specified local cache location, but it's immediately available via your internet link until the download is complete, so you can begin working immediately. If you want to see how long the download will take, you can choose Workspace > Background Activity to see the Background Activity window.

The Background Activity window lets you see what's happening in the background while you work

Linking Media Pool Clips and Timelines with Frame.io Clips

You can also use Frame.io accessibility in the Media Storage panel of the Media page to link clips or timelines with media that's already uploaded to your Frame.io account. Just locate and select a Frame.io clip in Media Storage, then right-click the clip or timeline you want to link it to in the Media Pool and choose Link to Frame.io Media from the contextual menu.

If you've linked a Frame.io clip to a timeline, comments made on that Frame.io clip appear on the linked timeline as Frame.io markers, just as if you'd exported that timeline directly to Frame.io.

Enabling Dropbox Replay Integration in Preferences

An Internet Accounts panel in the System tab of the DaVinci Resolve Preferences lets you sign into your Dropbox account. You'll need to enter your login name and password to enable Dropbox integration, but once entered, DaVinci Resolve will sign in automatically when DaVinci Resolve opens.

The Dropbox Login window in the Internet Accounts panel of the System tab of the DaVinci Resolve Preferences window.

Deliver and Upload to Dropbox Replay

A Dropbox Replay preset at the top of the Deliver page's Render Settings panel lets you render and upload a program for review. All options in the Render Settings panel update to present suitable controls for this process.

NOTE: The Dropbox Replay Render settings are separate from the normal Dropbox Render settings, and you need to use this specific set of presets to integrate with Dropbox Replay.

The Dropbox Replay Render settings (highlighted). Note they are different from the normal Dropbox Render settings to the left.

When you export to Dropbox Replay, the available choices in the Resolution, Format, Video Codec, and Audio pop-up menus are limited to those that are most suitable for Dropbox Replay. Choose the desired export options, then click the Add to Render Queue button to add this job to the Render Queue as you would with any other export. When that job is rendered, it automatically proceeds to upload to Dropbox Replay, and an upload percentage indicator appears in the job listing to show how far along this upload is. When it's finished, the job displays the text "Upload completed."

The job in the Render Queue shows you the percentage the file has uploaded, and lets you know when it's completed.

This upload is done in the background, so you can continue working on other things in DaVinci Resolve while the file uploads. If you want to see how long the upload will take on any other page, you can choose Workspace > Background Activity to see the Background Activity window.

Unlinking a Timeline from Dropbox Replay

If you wish to remove a specific timeline from using Dropbox Relay integration, simply right-click on the Timeline and select Unlink from Dropbox Media from the contextual menu.

Upload New Versions to Dropbox Replay

DaVinci Resolve supports the versioning functions found in Dropbox Replay. This lets the Replay user easily comment and switch between different versions of the same clip.

Once the original timeline has been rendered and uploaded to Dropbox using the Replay preset in the Deliver page, an additional checkbox appears in the preset, called “Upload as new version.” With this box checked, any subsequent renders of this timeline will automatically be added to the version stack of the clip in Dropbox Replay. The latest version will always be the default for the clip in the Replay interface.

Dropbox Replay Comments Sync with Timeline Markers

When you render a timeline directly to Dropbox Replay, that timeline is automatically linked to the movie that’s been uploaded to Dropbox Replay, and all comments, and graphical annotations (drawings and arrows) from reviewers that are added online via the Dropbox Replay interface are automatically synced to Dropbox markers on your timeline (so long as your computer has an active internet connection). Dropbox markers are distinct from all other markers and can be independently shown and hidden or deleted. Drawings and arrows from Dropbox Replay are converted into their equivalent DaVinci Resolve annotation graphics for visibility in DaVinci Resolve.

Comments and graphical annotations from Dropbox Replay appear as markers with their corresponding overlays in your DaVinci Resolve timeline.

Working With Dropbox Markers

Double-clicking any Dropbox marker in the Timeline opens a dialog that lets you send replies to comments that appear on Dropbox Replay, enabling editors to respond directly to commenters.

The Dropbox Replay comment dialog that appears when you open a Dropbox marker

You can also place Dropbox markers on the Timeline to have them automatically sync back to Dropbox Replay, giving you the ability to send your own comments back to commenters (be kind).

If you delete one or more Dropbox markers on the DaVinci Resolve timeline, those markers will also be deleted in Dropbox Replay. This includes the **Mark > Delete All Markers > Dropbox** command. This is not undoable.

Dropbox Marker Navigation

You can specifically navigate only the markers created in Dropbox Replay while in the comment dialog of a Dropbox marker, using the **Previous Marker** (Shift-UpArrow) and **Next Marker** (Shift-DownArrow) commands. This allows you to skip directly from comment to comment in Dropbox Replay without having to either navigate all markers in-between, or double-click each Dropbox marker individually to respond.
