

DaVinci Resolve

About DaVinci Resolve

Opens the splash screen showing the installed version of DaVinci Resolve.

Preferences – Page 97

Opens the System and User Preferences window.

Keyboard Customization – Page 123

Opens the Keyboard Customization Window.

Check for Updates

Checks to see if a newer version of DaVinci Resolve is available.

Quit DaVinci Resolve

Exits the program.

Extras Download Manager

Opens an interface for downloading additional packages.

File

New Project – Page 77

Creates a new project.

Open Recent Project – Page 88

Open a recent project from a list.

New Bin – Page 518

Creates a new Bin.

New Smart Bin – Page 370

Creates a new Smart Bin.

New Timeline – Page 663

Creates a new timeline.

Close Current Timeline

Closes the active timeline.

Close Project – Page 93

Closes the active project.

Save Project – Page 89

Saves the current project.

Save Project As – Page 89

Rename and create a copy of the current project before you save it.

Revert to Last Save Version – Page 76

Opens the last saved version of the current project, discarding any changes made after that.

Import

Tools for the importation of files and media into DaVinci Resolve.

- **Bin** – Page 386
- **Media** – Page 386
- **Media from XML** – Page 370
- **Timeline** – Page 387
- **Fusion Composition** – Page 1282
- **Subtitles** – Page 1084
- **Pre-conformed EDL** – Page 1199
- **Batch List From EDL** – Page 444

Import Project – Page 78

Imports a DaVinci Resolve Project file (.drp).

Import Metadata To – Page 419

Imports Metadata from a .csv file into DaVinci Resolve.

Export

Tools for the exportation of files and media from DaVinci Resolve.

- **Bin** – Page 386
- **Timeline** – Page 387
- **Subtitles** – Page 1084
- **Fusion Composition** – Page 1282
- **Current Frame as Still** – Page 358

Export Project – Page 76

Exports a DaVinci Resolve Project File (.drp).

Export Metadata From – Page 418

Exports Metadata from DaVinci Resolve to a .csv file.

Quick Export – Page 651

Opens the Quick Export Window.

Project Manager – Page 76

Opens the Project Manager Window.

Project Settings – Page 138

Opens the Project Settings Window.

Project Notes – Page 93

Opens the Project Notes editor.

Single User Project – Page 4159

Disables the Project Collaboration features.

Multiple User Collaboration – Page 4180

Enables Project Collaboration with other DaVinci Resolve workstations

Media Management – Page 995

Opens the Media Management Window.

Reconform from Bins – Page 1160

Reconforms a timeline using media in a selected bin.

Reconform from Media Storage – Page 1163

Reconforms a timeline using media in a specific file system folder.

easyDCP – Page 4079

Exposes the easyDCP toolset.

Dolby Vision® – Page 258

Loads the license and configuration files to enable Dolby Vision advanced trim controls

Blackmagic Cloud Account – Page 4129

Log in and switch Blackmagic Cloud accounts.

Edit

Undo – Page 72

Undos the previous change.

Redo – Page 72

Redo the previous change.

History – Page 72

Opens the Undo History submenu.

Cut – Page 807

Performs a cut operation on the current selection.

Ripple Cut – Page 807

Performs a ripple cut operation on the current selection.

Cut Head – Page 3802

Cuts the clip from the playhead backwards in the Fairlight page.

Cut Tail – Page 3802

Cuts the clip from the playhead forwards in the Fairlight page.

Copy – Page 807

Performs a copy operation on the current selection.

Copy Head – Page 3802

Copies the clip from the playhead backwards in the Fairlight page.

Copy Tail – Page 3802

Copies the clip from the playhead forwards in the Fairlight page.

Paste – Page 807

Pastes the previously copied/cut selection.

Paste Insert – Page 807

Pastes a clip as an insert edit.

Paste Attributes – Page 1014

Pastes video and audio attributes.

Paste Value – Page 3286

Pastes a the value of a specific parameter between Color nodes.

Remove Attributes – Page 1016

Removes audio and video attributes.

Dolby Vision® – Page 258

Copy and Paste Trim metadata for Dolby Vision.

Duplicate Clip or Current Timeline – Page 394

Makes a copy of the current clip or timeline.

Duplicate Selection – Page 3798

Duplicates one or more selected clips in Fairlight.

Delete Selected

Performs a delete function on all selected items.

Ripple Delete – Page 765

Performs a ripple delete on the selected clip.

Delete Gaps – Page 766

Deletes gaps in the active timeline.

Select All

Performs a Select All function on the active panel.

Deselect All

Clears any selections in the active panel.

Select – Page 744

Opens up a submenu for selecting adjacent clips in a timeline.

Insert – Page 835

Performs an Insert Edit using the selected clip.

Overwrite – Page 834

Performs an Overwrite Edit using the selected clip.

Replace – Page 836

Performs a Replace Edit using the selected clip.

Place on Top – Page 562

Performs a Place on Top Edit using the selected clip.

Ripple Overwrite – Page 561

Performs a Ripple Overwrite Edit using the selected clip.

Fit to Fill – Page 819

Performs a Fit to Fill Edit using the selected clip.

Append to End of Timeline – Page 844

Adds the selected clip to the end of the timeline.

Multicam – Page 890

Exposes the Multicam editing controls.

Swap Clips Towards Left – Page 802

Swaps the selected clips with the clip to the left of the selection.

Swap Clips Towards Right – Page 802

Swaps the selected clips with the clip to the right of the selection.

Edit Options

- **Switch to Timeline After Edit** – Page 820
Automatically switches focus to the timeline after an edit, rather than the Source Viewer.
- **Decompose Compound Clips on Edit** – Page 910
Automatically decomposes nested on timelines for easier editing.
- **Automatically Create Tracks on Edit** – Page 751
Automatically creates new tracks if your source has more tracks than the timeline.

Trim

Normal Edit Mode – Page 797

Puts the timeline in Selection Mode.

Trim Mode – Page 916

Puts the timeline in Trim Mode.

Range Selection Mode – Page 3774

Selects Range Mode in Fairlight.

Dynamic Trim mode – Page 946

Puts the timeline in Dynamic Trim Mode.

Toggle Slip/Slide Mode – Page 946

Toggles between slip and slide trim modes.

Blade Edit Mode – Page 804

Switches the timeline to blade mode.

Trim Editor – Page 922

Enables the Precision Trim Editor.

Select Nearest – Page 927

Selects a variety of edit points closest to the playhead.

Select All Clips Under Playhead – Page 754

Selects all clips on all tracks under the playhead.

Edit Point Type

Toggles the currently selected edit point among the outgoing, centered, or incoming part of the edit

Toggle V+A/V/A

Toggles the Edit Point type above between video, audio, or video and audio combined selections.

Select Nearest Edit To – Page 927

Selects the nearest edit point to a variety of clip parameters.

Select Nearest Clip To – Page 927

Selects the nearest clip to a variety of clip parameters.

Nudge

Opens a menu to move the selected clips one frame, or multiple frames left or right.

Trim Start – Page 944

Cuts all clips intersecting the playhead from that point backwards.

Trim End – Page 944

Cuts all clips intersecting the playhead from that point forwards.

Trim to Selection – Page 3665

Trims the heads and tails of the clips to the selected range in the Fairlight page.

Extend Edit – Page 946

Resizes one or more selected edit points or clips.

Extend Edit Selection To – Page 946

Opens a menu to select previous and next tracks and edits for the Extend Edit function.

Move Edit Selection To – Page 946

Opens a menu to move to previous and next tracks and edits for the Extend Edit function.

Resize – Page 916

Changes the clip in/out points based on the playhead position.

Ripple – Page 916

Changes the clip in/out points based on the playhead position, using a Ripple operation.

Roll – Page 916

Changes the clip in/out points based on the playhead position, using a Roll operation.

Slip Playhead To – Page 946

Slips the clip from the current position of the playhead to the in or out point of the clip.

Fade In to Playhead – Page 1060

Creates a fade in from the beginning of the clip to the playhead position.

Fade Out to Playhead – Page 1060

Creates a fade out from the playhead position to the end of the clip.

Crossfade Selection

Creates a crossfade for the selected range in the Fairlight page.

Slip Audio – Page 772

Opens a menu to slip audio forwards and backwards at a frame or subframe level.

Slip Eye – Page 332

Slips the opposite eye left or right one frame in the Color Page's Stereo 3D palette.

Timeline

Add Transition – Page 1020

Adds the default transition to the selected edit point.

Add Video Only Transition – Page 1020

Adds the default transition to the selected Video edit point only.

Add Audio Only Transition – Page 1020

Adds the default transition to the selected Audio edit point only.

Select Clips

Lets you select a range of clips.

- **Forward** – Page 755
Selects all clips forward from the playhead on either a single track, or all tracks.
- **Backward** – Page 755
Selects all clips backward from the playhead on either a single track, or all tracks.
- **By Flag Color** – Page 756
Selects all clips previously flagged with a specific color.
- **By Marker Color** – Page 756
Selects all clips having markers with a specific color.
- **By Clip Color** – Page 756
Selects all clips with a specific color.

Razor – Page 804

Activates the Razor (Blade) tool.

Split Clip – Page 796

Splits a clip at the playhead position.

Join Clip – Page 796

Joins two clips that are separated by a through edit.

Detect Scene Cuts – Page 458

Activates Scene Cut Detection on the current selection.

AI Tools

- **Audio Assistant** – Page 3889
Automatically mix your timeline audio.
- **Create Subtitles from Audio** – Page 1090
Automatically creates subtitles based off speech in audio tracks.

Audio

- **Bounce Selected Tracks in Place** – Page 3888
Bounces the selected tracks to a new layer in the Fairlight page.
- **Bounce Mix to Track** – Page 3888
Bounces the selected mix to a new track in the Fairlight page.
- **Flatten Audio Track Layers** – Page 3674
Flattens out Track Layers in the Fairlight Page.
- **Trim Audio Edits to Frame Boundaries** – Page 966
Eliminates any sub-frame audio adjustments.

- **Mute Selected Track** – Page 985

Mutes the selected audio track in the Fairlight Page.

- **Clear Mutes** – Page 3885

Un-mutes all the tracks in the Fairlight Page.

- **Solo Selected Tracks** – Page 951

Solos the selected audio track in the Fairlight Page.

- **Clear Solo** – Page 3885

Un-solos all tracks in the Fairlight Page.

- **Layered Audio Editing** – Page 3807

Turns on Audio Layering in the Fairlight Page.

- **Audio Scrubbing** – Page 688

Toggles audio scrubbing on or off.

- **Loop Jog** – Page 3745

Toggles Loop Jog in the Fairlight Page.

Video

- **Clean Up Video Tracks** – Page 817

Opens a toolset to improve the organization of a timeline's video tracks.

- **Switch to Camera Originals** – Page 526

Toggles between Camera Masters and ISO's in ATEM projects.

- **Linked Move Across Tracks** – Page 769

Toggles linked clips moving tracks together.

- **Selection Follows Playhead** – Page 687

Toggles the automatic selection of the clip under the playhead.

- **Ripple Timeline Markers** – Page 870

Timeline markers will reflow with ripple operations.

Match Frame – Page 885

Performs a Match Frame operation on the clip.

Snapping

Turns playhead snapping on and off.

Linked Selection – Page 768

Toggles linked selection of clips.

Track Destination Selection – Page 820

Chooses specific tracks for editing operations.

Lock Tracks

Prevents further changes to the selected track.

Auto Track Selector – Page 744

Automatically select tracks for editing operations.

Enable/Disable Video Tracks – Page 685

Shows or hides specific video tracks.

Output Blanking – Page 295

Sets letterboxing options.

Find Current Timeline in Media Pool

– Page 403

Opens the bin in the media pool with the selected timeline, and highlights it.

Clip

New Compound Clip – Page 906

Makes a compound clip out of the selected clips.

New Fusion Clip – Page 1266

Makes a Fusion composition out of the selected clips.

New VFX Connect Clip – Page 1122

Links the current selection to the stand alone version of Fusion.

Open in Timeline – Page 912

Opens a nested timeline temporarily into its component pieces for editing.

Decompose in Place – Page 910

Breaks a nested timeline into its original component pieces.

Split PSD Layers in Place – Page 812

Breaks a photoshop document into its original component layers.

Enable Clip – Page 764

Toggles a clip's visibility on or off.

Link Clips – Page 771

Toggles Link or Unlink for the selected clips.

Change Clip Duration – Page 556

Opens the Change Clip Duration tools.

Clip Speed – Page 1071

Opens the simple speed retiming controls.

Fusion Referenced Compositions – Page 1268

Various selection tools for Fusion Reference Compositions.

Auto Align Clips – Page 809

Aligns clips on a timeline based on timecode or audio waveform.

AI Tools

- **Dialogue Matcher** – Page 3806
Automatically match dialog sound between two clips.
- **Voice Convert** – Page 3818
Converts one voice to another using AI.

Audio Operations

- **Trim Audio Levels** – Page 3840
Presents options to increase or decrease the level of a clip by 1 or 3dB.
- **EQ Matcher** – Page 3804
Automatically matches EQ sound between two clips.
- **Level Matcher** – Page 3805
Automatically matches levels between two clips.

Take Selector – Page 905

Creates a Take Selector from the selected clips.

Finalize Take – Page 906

Removes a Take Selector and uses the starred take.

Multicam Cut – Page 898

Cuts to another angle in a Multicam Clip.

Multicam Switch – Page 898

Changes to another angle in a Multicam Clip without cutting.

Render Cache – Page 200

Toggles the options for caching Fusion compositions in a timeline.

Conform Lock Enabled – Page 1158

Locks clip references to a specific media file, preventing accidental changes.

Conform Lock with Media Pool Clip – Page 1158

Forces a clip to reference a specific media file selected in the Media Pool.

Find Clip in Media Pool – Page 887

Locates the selected clip in the Media Pool.

Match Frame to Source Clip – Page 885

Performs a Match Frame operation on the selected clip in the timeline.

Mark

Mark In – Page 736

Sets the In Point on a clip or timeline.

Mark Out – Page 736

Sets the Out Point on a clip or timeline.

Mark Video In – Page 737

Creates an in point for the video track of a split edit.

Mark Video Out – Page 737

Creates an out point for the video track of a split edit.

Mark Audio In – Page 737

Creates an in point for the audio tracks of a split edit.

Mark Audio Out – Page 737

Creates an out point for the audio tracks of a split edit.

Convert In and Out to Duration Marker

– Page 721

Turns the in and out points into a duration marker.

Set In and Out from Duration Marker

– Page 740

Turns a duration marker into In and Out Points.

Clear In – Page 737

Removes the In Point on a clip or timeline.

Clear Out – Page 737

Removes the Out Point on a clip or timeline.

Clear In and Out – Page 737

Removes both the In and Out Points on a clip or timeline.

Clear Video In and Out – Page 737

Clears

the In and Out Points on the Video track for a split edit.

Clear Audio In and Out – Page 591

Clears the In and Out Points on the Audio tracks for a split edit.

Mark Clip – Page 824

Automatically sets In and Out Points based on a clip duration.

Mark Selection – Page 824

Automatically sets In and Out Points based on total duration of multiple clips.

Create SubClip – Page 455

Creates a subclip based on the In and Out points of a clip.

Keyframe Timeline Mode – Page 3287

Choose which keyframe types to copy between Color grades.

Add Keyframe – Page 3256

Adds a Dynamic Keyframe at the playhead position.

Add Static Keyframe – Page 3385

Adds a Static Keyframe at the playhead position.

Delete Keyframe

Removes a keyframe at the playhead position.

Delete All Keyframes

Removes all keyframes from a selected parameter.

Move Selected Keyframes Left

Moves all selected keyframes left by 1 frame.

Move Selected Keyframes Right

Moves all selected keyframes right by 1 frame.

Move Selected Keyframes Up

Moves all selected keyframes up by 1 unit.

Move Selected Keyframes Down

Moves all selected keyframes down by 1 unit.

Add Marker – Page 865

Adds a marker to a clip or timeline by color.

Add and Modify Marker – Page 993

Adds a marker to a clip or timeline, and opens the Marker properties dialog.

Modify Marker – Page 869

Opens the Marker properties dialog for the selected marker.

Delete Marker – Page 871

Deletes the selected Marker

Delete All Markers – Page 871

Deletes all markers on a clip or timeline, or by specific marker color.

Favorite Keywords – Page 348

Apply a favorite keyword to a clip from your list.

Add Flag – Page 864

Adds a flag to a clip by color.

Clear Flags – Page 721

Removes all flags from a selected clip.

Delete All Flags – Page 864

Removes all flags from all clips by color.

Set Clip Color – Page 880

Changes a clip's color in the timeline.

View

Bypass Color and Fusion – Page 673

Turns on or off Color and/or Fusion operations in a timeline.

Display Broadcast Safe Exceptions

– Page 2954

Turns on the Broadcast Safe overlay.

Source/Timeline Viewer – Page 672

Toggles between making the Source or Timeline viewer active in the Edit page.

Source Clip/Source Tape – Page 545

Toggles between Source Clip and Source Tape in the Cut page viewer.

Zoom

Zoom options for the viewer.

Zoom Around Mouse Pointer – Page 712

Centers the timeline zoom on the pointer rather than the playhead in the Edit page.

Zoom Audio Waveform – Page 3671

Sets waveform zooming parameters in the Fairlight page.

Safe Area – Page 548

Toggles the safe area overlays for the Edit and Color pages.

Select Aspect Ratio – Page 2996

Selects the Aspect Ratio for the Safe Area overlay.

Switch Eye To – Page 332

Chose the current eye for Stereoscopic workflows.

Viewer Overlay – Page 1067

Sets the Viewer On Screen controls in the Edit Page.

Show Duplicate Frames – Page 717

Duplicate clips are marked in the Edit page timeline.

Show File Names – Page 444

Toggles between displaying Clip names or File names in the Edit page.

Overlay Synced Audio File Names

– Page 443

Shows the names of the original audio files in the Edit page.

Show Audio Track Layers – Page 3994

Reveals track layers in the Fairlight page.

Show Subtitle Regions – Page 1098

Shows or Hides regions in the subtitle tracks.

Timeline Thumbnail Mode – Page 3029

Toggles clip order between A or C mode in the Color page.

Timeline Thumbnail Info – Page 3026

Choose what clip info is shown on the thumbnail in the Color page.

Timeline Thumbnail Size – Page 3024

Chooses the size of the thumbnails in the Color page.

Show Current Clip With Handles – Page 3026

Shows the handles of a clip in the Color page.

Show Markers – Page 878

Shows or Hides markers based on color.

Show Flags – Page 865

Shows or Hides flags based on color.

Timeline Scrolling – Page 3678

Sets the timeline scrolling method in the Fairlight page.

Show Preview Marks – Page 826

Toggles Preview Marks on or off in the Edit page.

Enable Multiview Edit Preview – Page 922

Enables or disables the multi-frame displays in the Edit page.

Playback

Use Optimized Media if Available – Page 193

Toggles the use of Optimized Media or original media.

Proxy Handling – Page 214

Exposes a submenu to control how proxy media playback is handled.

Timeline Proxy Resolution – Page 195

Options for Timeline Proxy Mode playback.

Render Cache – Page 200

Options for using the Render Cache.

Delete Render Cache – Page 193

Options for Deleting the Render Cache.

Manage Render Cache – Page 206

Opens the Cache Manager.

Fusion Memory Cache – Page 204

Options for using the Fusion Cache.

Play Reverse – Page 727

Plays 100% backward.

Stop – Page 727

Stops playback.

Play Forward – Page 727

Plays 100% forward.

Pause/Start Playback – Page 727

Stops and Starts playback.

Play Again – Page 727

Restarts playback from the original position.

Playback Post-Roll – Page 688

The playhead will continue playing past the last clip in the timeline.

Stop and Go to Last Position – Page 731

Playhead returns to original position on stop.

Record – Page 3744

Initiates recording in the Fairlight Page.

Fast Reverse – Page 721

Plays in Fast Reverse.

Fast Forward – Page 727

Plays in Fast Forward.

Play Slow – Page 729

Plays forward in Slow Motion.

Fast Review – Page 680

Initiates the Fast Review function.

Loop/Unloop – Page 729

Toggles Looping playback on or off.

Play Around/To – Page 730

Options for choosing the Play Around/To mode.

Timecode – Page 732

Options to increment or decrement timecode.

Go To – Page 738

Options to move the playhead directly to a certain location.

Step One – Page 727

Move forward or backward one frame or one second.

Previous

Moves playhead to the previous Clip, Keyframe, Marker or Gap.

Next

Moves playhead to the next Clip, Keyframe, Marker or Gap.

Jump Left – Page 3748

Moves clip selection left in the Fairlight page.

Jump Right – Page 3748

Moves clip selection right in the Fairlight page.

Cintel Scanner – Page 474

Transport controls for the Cintel Scanner.

Fusion

Show Toolbar – Page 1237

Toggles the Fusion toolbar on or off.

Fusion Settings – Page 1260

Opens the Fusion Settings window.

Reset Composition

Resets a Fusion composition to its initial state.

Macro Editor – Page 1369

Opens the Macro Editor.

Import

Specific file format import for Fusion.

- **Alembic Scene** – Page 1868
- **FBX Scene** – Page 1814
- **PSD** – Page 1288
- **Shapes** – Page 1284
- **SVG** – Page 1284
- **Tracks** – Page 1284

Render All Savers – Page 1296

Renders OpenEXR files.

Color

Nodes – Page 3317

Opens a menu for various node operations.

Reset – Page 3316

Options for resetting a Node.

Grade Version – Page 3274

Opens a menu for clip Version operations.

Stills

Opens a menu for manipulating stills in the Gallery

- **Grab Still** – Page 3257
- **Play Still** – Page 2999
- **Previous Still** – Page 3260
- **Next Still** – Page 3260

Apply Grade – Page 3288

Applies a grade to the selected clips.

Apply Active Layer – Page 3323

Applies the current Node Stack Layer to the grade.

Append Node Graph – Page 3290

Appends a node graph to the end of the current node tree.

Step Timeline Wipe – Page 3308

Moves the selected wipe timeline clip forward one frame.

Preview Memory – Page 3317

Preview a saved grade on the current clip.

Original Memory – Page 3317

Reverts to a grade's original state.

Memories – Page 3271

Load and Save Memories.

Apply Grade From One Clip Prior – Page 3288

Copies a grade from one clip back.

Apply Grade From Two Clips Prior

– Page 3288

Copies a grade from two clips back.

Presets – Page 3169

Accesses HSL Qualifier color presets.

Ripple Node Changes to Selected Clips

– Page 3296

Copies changes made in a node to a selected clips.

Ripple Node Changes to Current Group

– Page 3297

Copies changes made in a node to a group.

Append Node to Selected Clips – Page 3297

Appends the selected node to multiple clips.

Auto Color – Page 3045

Performs an Auto Color operation.

Active Playhead – Page 3026

Chooses the Active Playhead.

Tracker – Page 3230

Basic Tracker controls.

Resolve Live – Page 313

Opens the Resolve Live interface.

Printer Light Hotkeys – Page 3075

Activates Printer Light controls on the numerical keypad.

Full Printer Light – Page 3074

Adjust printer lights in Full increments.

Half Printer Light – Page 3075

Adjust printer lights in Half increments.

Quarter Printer Light – Page 3075

Adjust printer lights in Quarter increments.

Dolby Vision® – Page 258

Performs an automatic Dolby Vision trim analysis.

HDR10+ – Page 276

Performs an automatic HDR10+ trim analysis.

HDR Vivid – Page 277

Performs an automatic HDR Vivid trim analysis.

Automatically Link AMF for – Page 250

Choose Selected or All shots to link an

ACES AMF file to.

Fairlight

Bus Format – Page 3730

Opens the Bus Format window where you can create mono to multi-channel Atmos buses.

Bus Assign – Page 3733

Opens the Bus Assign window where you can patch buses to tracks, tracks to buses and buses to buses.

Presets Library – Page 656

Opens the Presets Library allowing you to choose saved Preset Configurations for EQ, Dynamics, Plugins, Global Track, Global Bus and Fairlight Configurations.

Link Group – Page 3727

Opens the Link Group window allowing you to link groups of tracks.

VCA Assign – Page 3882

Opens the VCA Assign window allowing you to assign VCA groups to specific tracks.

Patch Input/Output – Page 3734

Opens the Patch Input/Output window allowing you to patch Source to Destination routings.

Test Tones Settings – Page 3712

Opens the Test Tones Settings window with the Oscillator for creating various signal tones.

Synchronization Settings – Page 3713

Opens the synchronization timecode settings in the Fairlight page.

Input Monitor Style – Page 3756

Allows you to choose how to monitor an input.

Monitoring – Page 3978

Allows you to change the Global monitoring between Mute, Dim, and Mono.

Exclusive Solo – Page 3885

When selected takes all other soloed tracks out of solo mode.

Immersive Audio

Exposes the following immersive audio tools.

- **B-Chain Control** – Page 4012
- **Space View Scope** – Page 4016
- **Import Master - import ADM files** – Page 3997
- **Export Master - export ADM files** – Page 3997
- **Renderer Settings** – Page 3997

Automation – Page 3893

Lists the Fairlight automation options.

Batch Fade Settings – Page 3810

Opens the Batch Fade Settings window to set fade types and durations.

Apply Batch Fades – Page 3810

Applies the fades set in the Batch Fade Settings window.

View Clip Info Display – Page 3682

Opens the Clip Info Display window.

Show Clip Gain Line – Page 3839

Shows or hides the Clip Gain Line in clips on the timeline.

Workspace

Switch to Page – Page 21

Switches to the selected page.

Show Page – Page 16

Shows or hides specific pages.

Show Page Navigation – Page 22

Disables page navigation icons in the GUI.

Show Panel in Workspace – Page 59

Shows or hides specific panels.

Active Panel Selection – Page 57

Switches to the selected panel.

Media Pool Windows – Page 395

Presents a list of open Bin windows.

Dual Screen – Page 61

Puts the DaVinci Resolve interface in Dual Screen Layout.

Primary Display – Page 61

Lets you choose the monitor for the primary DaVinci Resolve display.

Video Clean Feed – Page 63

Shows the final video output on the selected screen.

Viewer Mode – Page 2993

Chooses the Viewer Mode.

Fairlight Viewer – Page 3990

Chooses the Fairlight Viewer mode.

Single Viewer Mode – Page 673

Toggles Single Viewer mode in the Edit Page.

Layout Presets – Page 63

Saves and Loads custom screen layouts.

Reset UI Layout – Page 63

Resets the UI Layout to the default settings.

Background Activity – Page 4038

Displays the upload progress of a render.

Data Burn-In – Page 150

Opens the Data Burn-In window.

Gallery – Page 3257

Opens up the Gallery Window in the Color Page.

Keyword Dictionary – Page 346

Opens up the Keyword Dictionary.

People – Page 415

Opens up the People window for face detection.

Scene Cut Detector – Page 459

Opens the legacy Scene Detector in the Media page.

Timecode Window – Page 693

Opens the floating timecode window.

Video Scopes – Page 3007

Opens the Scopes window.

Remote Grading – Page 4194
